

NDC Project Management System

Role-Based Training Manual

For Superadmin, Project Officer, Proponent, Workgroup Head, ManCom, Board, Investment Committee, Legal, and Finance users.

Manual scope	How to use this guide
Audience	Training participants using seeded/demo accounts in the NDC PMS environment.
Credential handling	This manual lists roles, usernames, and emails. The shared training password is distributed separately by the facilitator.
Main practice flow	Login, review dashboard, open the assigned module, complete the role action, then verify status and notifications.

1. Quick Start

Use this section at the start of training so every participant follows the same baseline process before role-specific exercises begin. The API remains the source of truth for permissions, workflow status, validations, and approval results.

Step	Activity	Expected result
1	Log in	Use the assigned training email or username. The facilitator provides the training password separately.
2	Check the dashboard	Review portfolio cards, pending actions, overdue items, and notifications.
3	Open the relevant module	Use the left sidebar: Projects, Legacy Projects, Monitoring Compliance, People & Access, or Administration tools.
4	Review the record	Open the project, requirement, account, notification, or report and check current status before acting.
5	Record the action	Add required notes, upload evidence, update status, or route the item to the next reviewer.
6	Verify the result	Refresh the page and confirm the status, timeline, task, or notification changed as expected.

Training reminder: do not use production personal passwords during classroom exercises. Use only facilitator-provided training credentials.

2. Available Training Users

The following users are seeded in the project for training and UAT exercises. Staff and Supervisor are system roles, but no seeded demo account was found for those roles in the current UserSeeder.

Role	Email	Username	Training purpose
superadmin	sa@gmail.com	superadmin	Full system administration, access settings, notification rules, account approvals, and audit review.
Project Officer	admin@ndc.gov.ph	admin	Internal project intake, project updates, requirement checks, workflow routing, and monitoring.
Project Officer	testuser@ndc.gov.ph	testuser	Alternate project officer account for classroom exercises.
Project Officer	pdo@ndc.gov.ph	pdo	Primary PDO account for end-to-end project workflow practice.
Proponent	alvindalejoyosa30@gmail.com	proponent	External proponent portal, profile, documents, requirement submissions, and project updates.
Workgroup Head	wgh@ndc.gov.ph	workgrouphead	Workgroup review, endorsement, and returned-action practice.
ManCom	mancom@ndc.gov.ph	mancom	Management Committee review, recommendations, approval conditions, and routing to Board.
Board	board@ndc.gov.ph	board	Board review, approval, conditional decision, or return for revision.
Investment Committee	ic@ndc.gov.ph	investmentcommittee	Investment evaluation review, criteria checking, and recommendation practice.
Legal	legal@ndc.gov.ph	legal	Legal due diligence, agreement form review, return, and signing readiness.
Finance	finance@ndc.gov.ph	finance	Financial due diligence, funding readiness, release, collections, and remittance evidence.

3. Common Navigation and Controls

- Dashboard shows portfolio status, overdue work, pending approvals, and quick operational indicators.
- Projects is the primary workspace for active PMS project records, documents, approvals, and task status.
- Legacy Projects is used to clean imported historical records, complete missing data, link proponents, and prepare monitoring.
- Notifications and the bell menu show workflow events. Opening a notification should take the user to the related project, account, or page.
- Monitoring Compliance is used once a project has moved into implementation and needs reports, evidence, or compliance follow-up.
- People & Access, System Settings, Notification Management, and Audit are administrative areas and should be used only by authorized roles.

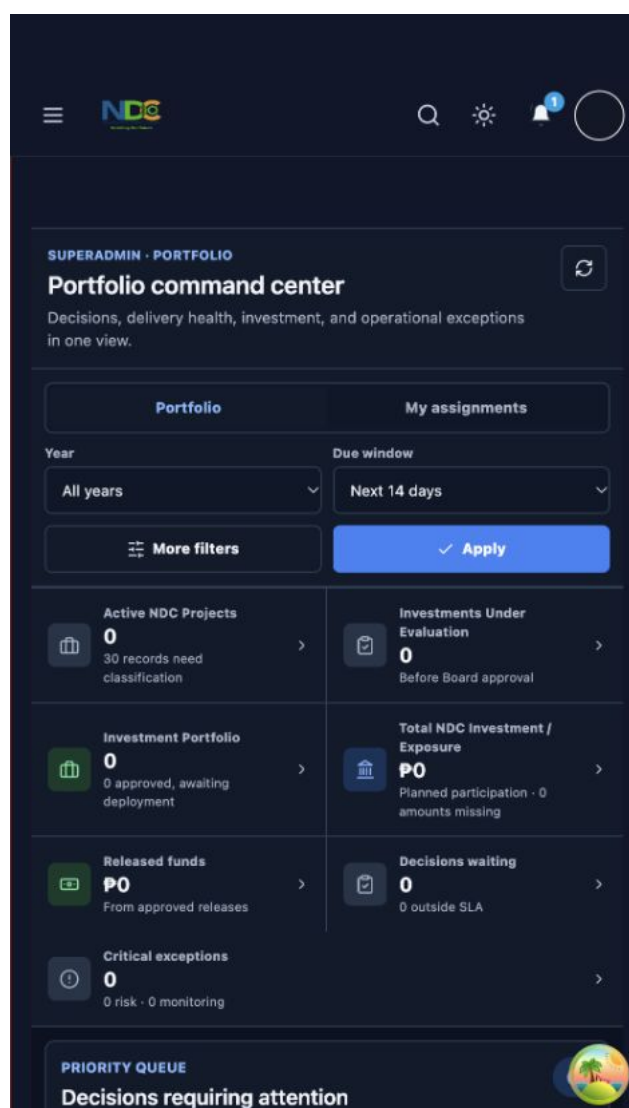

4. Screenshot Walkthrough: Simulated Project Lifecycle

This walkthrough uses the seeded training environment and follows one sample record, SPG-2026-018, as an example project. The screens show the user path trainers can demonstrate: review portfolio health, locate or create project records, clean legacy data, inspect readiness, monitor implementation, view map context, and follow notifications.

Lifecycle step	Screen to demonstrate	Trainer talking point
1. Portfolio review	Dashboard	Start with the command center to identify pending decisions, migration readiness, and project health.
2. Project workspace	Projects & Investments	Show where new PMS projects are searched, filtered, exported, and reviewed.
3. Legacy migration	Legacy Projects	Use SPG-2026-018 as the sample imported record requiring cleanup.
4. Project readiness	Review legacy project drawer	Open the record and check monitoring readiness, missing fields, source data, and linked account status.
5. Implementation monitoring	Monitoring Compliance	Explain how implementation and compliance follow-up is tracked after approval/readiness.
6. Geographic context	Project Map	Show how projects can be reviewed by location when map data is available.
7. Action follow-up	Notifications	Show where role-based alerts and next actions appear.

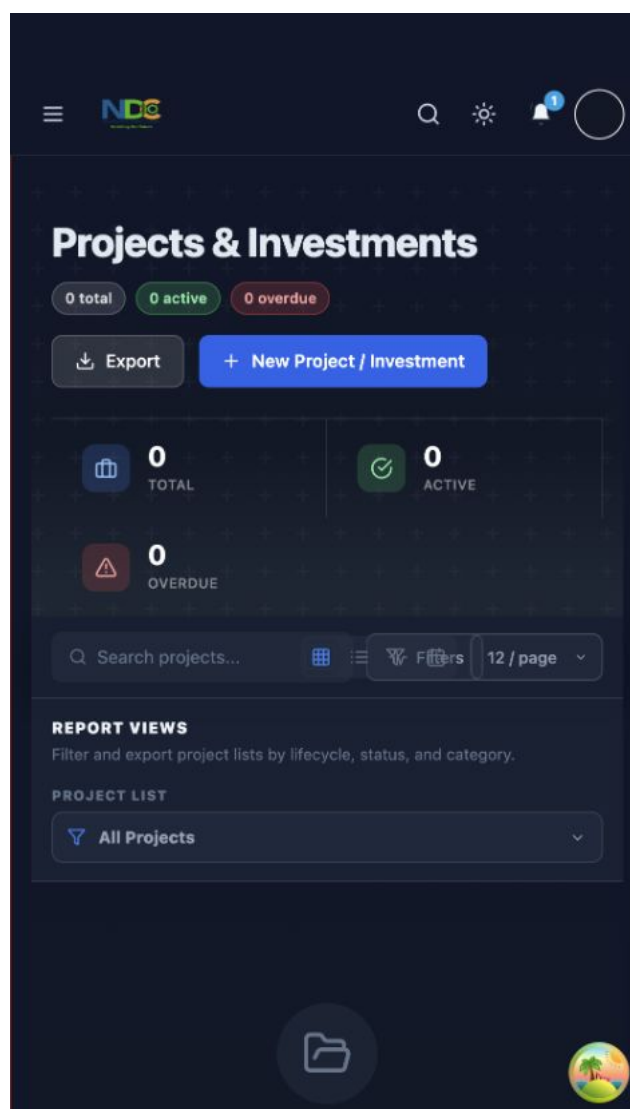

Step 1. Dashboard portfolio review

Begin on the dashboard. Point out portfolio cards, decision queues, migration readiness, and lifecycle distribution. This is where trainees learn what needs attention before opening a record.

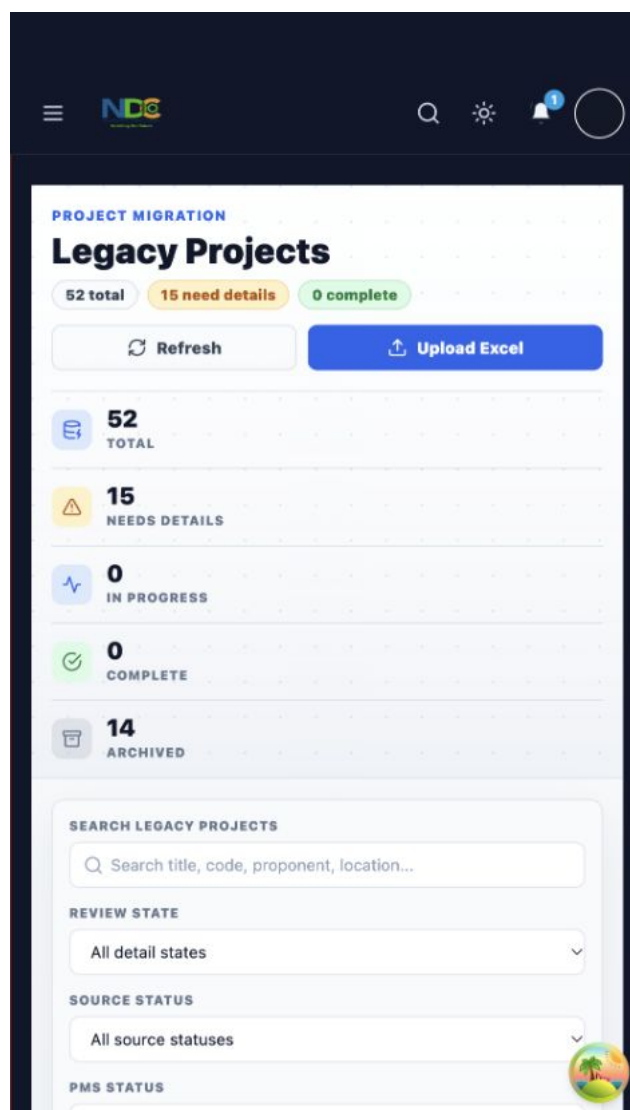

Step 2. Projects & Investments workspace

Open Projects & Investments to explain project search, filters, list/grid views, exports, and where a project officer would create or review PMS project records.

Step 3. Legacy Projects list

Open Legacy Projects and use the filter bar and table. The sample record SPG-2026-018 appears as a legacy item that still needs cleanup before it is fully usable for monitoring.

Step 4. Sample project detail drawer

Open SPG-2026-018. Show monitoring readiness, missing fields, source status, raw cost/released values, import batch, and the action buttons used during cleanup.

Step 5. Monitoring Compliance

Use Monitoring Compliance to explain where approved or implementation-stage projects are followed up with reports, evidence, and status checks.

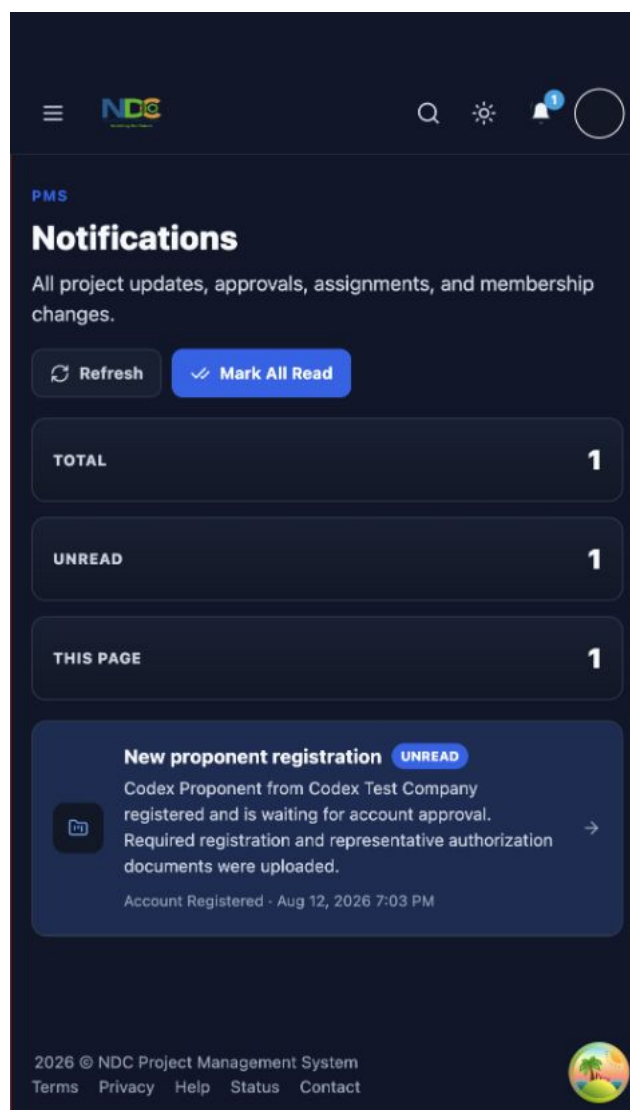

Step 6. Project Map

Use Project Map to explain spatial review once sector/location data is complete. This helps users understand why clean location data matters.

Step 7. Notifications

Finish in Notifications. Explain that users should open alerts, follow the related record, complete the requested action, and refresh to verify the status change.

5. Role-Based Exercises

Superadmin

What this user should practice:

- Open Dashboard to check portfolio counts, bottlenecks, overdue tasks, and pending approvals.
- Use People & Access to review active users, role assignments, and pending proponent registrations.
- Use System Settings and Notification Management to adjust app-level rules, notification channels, and templates when authorized.
- Use Audit to review user activity and trace important workflow actions.

Suggested hands-on exercise:

- Approve or reject a pending proponent registration after checking uploaded documents.
- Confirm the Legacy Projects menu is visible for authorized users.
- Review notification settings without changing production rules during training.

Project Officer

What this user should practice:

- Create or update project records, classify process track, sector, location, investment type, estimated cost, and owner fields.
- Review submitted documents and requirement groups, then mark items complete, return them, or request corrections.
- Route projects through workgroup, Investment Committee, ManCom, Board, Legal, Finance, implementation, monitoring, and closeout steps.
- Use task boards and monitoring pages to track due dates, evidence, status, and next actions.

Suggested hands-on exercise:

- Create a draft project and complete the basic profile.
- Send requirements back to the proponent with a clear note.
- Move a project to the next appropriate review stage once package requirements are ready.

Proponent

What this user should practice:

- Register an account with company details and representative authorization documents.
- After approval, log in to submit project information, upload required files, and respond to returned requirements.
- Check notifications and project detail pages for comments, due dates, and required corrections.
- Submit monitoring reports or compliance evidence when the project is in implementation.

Suggested hands-on exercise:

- Update the organization profile and contact details.
- Upload a missing requirement, then confirm the project officer can see it.
- Open a notification and navigate to the related project or account page.

Workgroup Head

What this user should practice:

- Review project summaries, due diligence output, and recommendation notes from the Project Officer.
- Approve, return, or endorse the workgroup package according to internal review status.
- Record concise comments so downstream approvers understand the recommendation.

Suggested hands-on exercise:

- Approve a ready package for ManCom review.
- Return an incomplete package with comments explaining what must be corrected.

Investment Committee

What this user should practice:

- Review investment criteria, financial assumptions, strategic fit, and risk notes for SVF or investment-related projects.
- Confirm evaluation outputs are complete before they are used for ManCom review.
- Add comments that identify concerns, conditions, or recommended follow-up.

Suggested hands-on exercise:

- Review an investment criteria section and record a recommendation.
- Check that required supporting documents are present before endorsement.

ManCom

What this user should practice:

- Review management-level recommendation packages and approve, conditionally approve, or return projects.
- Confirm whether a project should proceed to Board review, Legal, Finance, implementation, or further due diligence.
- Use comments and decision notes to document instructions and conditions.

Suggested hands-on exercise:

- Approve a package for Board approval.
- Return a package to the Project Officer with management comments.

Board

What this user should practice:

- Review Board approval packages, decision papers, resolutions, and conditions.
- Approve, conditionally approve, reject, or return items according to the approval workflow.
- Confirm that Board action is reflected in the project timeline and next stage.

Suggested hands-on exercise:

- Record a Board approval decision with conditions.
- Confirm the project moves to the next stage after Board action.

Legal

What this user should practice:

- Review legal due diligence, agreement forms, draft contracts, and signing readiness.
- Return incomplete agreement forms to the Project Officer with clear correction notes.
- Confirm legal documents are ready before agreement signing or implementation steps proceed.

Suggested hands-on exercise:

- Review a submitted agreement form and return it with comments.
- Mark the legal review ready when all legal requirements are complete.

Finance

What this user should practice:

- Review financial due diligence, funding readiness, fund release evidence, collections, receipts, and remittance records.
- Confirm financial documents are complete before release or implementation milestones proceed.
- Use monitoring and reports to check financial status across active projects.

Suggested hands-on exercise:

- Verify a funding readiness package.
- Review remittance or release evidence and record the correct status.

6. Legacy Projects Cleanup Exercise

Use this exercise for users assigned to the Legacy Projects migration cleanup. The goal is to make historical records usable in PMS without losing source context.

Activity	What to check
Open Legacy Projects	Review totals for total, needs details, in progress, complete, and archived records.
Filter records	Use search, review state, source status, PMS status, sector, and archive state filters to narrow the list.
Open a legacy row	Check mapped PMS status, sector/location, cost/released amount, partner/account, and review state.
Complete missing details	Update missing title, sector, location, proponent link, costs, or monitoring readiness fields.
Link account when needed	Associate an active proponent account before opening monitoring for external-facing legacy records.
Confirm cleanup status	Move the review state from needs details to in progress or complete once required fields are verified.

Completion rule: a legacy project should be marked complete only after required details are available, the PMS status is mapped, and the linked account or partner handling is clear.

7. End-to-End Classroom Scenario

Step	Role	Training action
1	Superadmin	Approve the proponent account and confirm the user can access the system.
2	Proponent	Log in, review profile, upload or update project requirement documents, and check notifications.
3	Project Officer	Review the project package, request corrections if incomplete, or route it to the next reviewer.
4	Workgroup Head / Investment Committee	Review the recommendation and record endorsement or required changes.
5	ManCom	Record the management decision and route to Board, Legal, Finance, or back for revision.
6	Board	Record final approval, conditional approval, return, or rejection.
7	Legal / Finance	Complete agreement or financial readiness review before implementation.
8	Project Officer	Open implementation or monitoring and verify project timeline, tasks, and notifications.

8. Facilitator Checklist

- Confirm all participants can log in with their assigned training account.
- Confirm permissions match the expected menu and page access for each role.
- Prepare at least one sample project with requirements, approval steps, and notifications available for practice.
- Ask each participant to complete one action and verify the downstream user sees the result.
- Close the session by reviewing audit/activity traces, unresolved tasks, and any UAT comments.

9. Troubleshooting During Training

Issue	What to do
User cannot log in	Check email/username, use the facilitator-provided training password, and confirm the account is active.
Menu item is missing	Confirm the user role and permission assignment. Some pages are intentionally role-limited.
Project status did not change	Refresh the page, reopen the project, and check whether required fields or documents are still missing.
Notification still appears	Refresh notifications, confirm whether it is unread or a separate event, then check the related record.
Table text is clipped	Use the page scroll area or reduce zoom. Report the page, viewport size, and affected row for UI follow-up.
